

GOULDIAN FINCH

Erythrura gouldiae

Gouldian Finches also known as Rainbow Finches are one of the most colorful finch species in the bird world. Native to northern Australia, these tiny birds come in a beautiful variety of vibrant colors including purple, yellow, green, blue, and red. Gouldian Finches are peaceful and social birds that do best when kept with other finches. While they are not known for talking or tricks like parrots, they are loved for their gentle personalities, soft chirps, and stunning appearance. These little birds still require proper care, a spacious enclosure, a healthy diet, and a calm environment to thrive and stay healthy.

Lifespan

5-7 years

Cage Size

When considering getting a cage for your Gouldian Finch we recommend looking into a cage that is at least 18x14 that will allow them to get around. Larger cages are best to look into as well since these birds love to fly and jump around frequently. Having lots of space will ensure they are happy and healthy.

Toys & Accessories

Like all birds, Gouldian Finches need a variety of toys to keep them busy and happy. Popular toys for this species are toys with paper, bells and soft wood. These toys will keep your finch very happy. Avoid any toys/accessories that contain rope and mirrors as these are dangerous for all parrots. Natural Perches are best for every bird species, most popular perches are made from manzanita and java wood.

Health

We recommend taking your bird/s to the vet at least once a year for a general exam to make sure they are healthy. This is the avian veterinarian that we highly recommend taking your flock to:

Paws, Wings & Scales Animal Hospital
125 Paterson Ave # 1, Little Falls, NJ 07424
973-638-1180
